5 reasons to vaccinate your child against flu

- The nasal spray helps protect against flu, has been given to millions of children worldwide and has an excellent safety record.
- The nasal spray is painless and easy to have.
- Flu can be really serious, especially for children with medical conditions like heart disease and diabetes.
- If your child gets flu you may have to take time off to look after them.
- Protecting your child can stop flu spreading to other children and the family, especially babies and grandparents, who may be at higher risk from flu.

What should I do?
This year all 2-, 3- and 4-year-olds and children in school years 1 and 2 are being offered the free flu vaccination.*
You will be contacted to let you know where your child will be vaccinated.

* In some parts of the country, all primary school-aged children will be offered the vaccine.
