If your baby is under 6 months old seek medical advice without delay

Advice for treating children with fever

Most fevers (high temperatures) in children are not serious and are due to the common infections of childhood such as coughs, colds and other viral infections. However, sometimes a fever is a symptom of a serious infection.

This leaflet gives some advice on how to look after a child with fever. The “traffic light” diagram (inside this leaflet, when folded) gives some pointers on when and where to seek advice in the local area.

On the back, you will find some guidance on looking after your feverish child.
If your baby is under 6 months old seek medical advice without delay

### Looking after your feverish child over 6 months old

- If you are concerned your child's condition is worsening, follow the traffic light advice (see right).
- Check your child regularly during the day and also through the night.
- If a rash appears do the 'Glass Test' (see box).
- Children with fever should not be under or over dressed.
- If your child is distressed or you feel they are in discomfort you may use medicines (such as Paracetamol or Ibuprofen) to help them feel more comfortable. However, you may not need to use these medicines. Please note if your child has been diagnosed with asthma, Ibuprofen is not recommended.
- Please read and follow the instructions on the medicine container.
- At home, we do not recommend giving both Paracetamol and Ibuprofen at the same time together. If your child has not improved after 2-3 hours you may want to give them the other medicine. Never exceed the dose on the bottle.
- Do not give Aspirin to a child.
- Please ask your local community pharmacist for more advice about medicines.
- Ensure your child drinks regularly.
- If your child is due to have immunisations, please consult your Practice Nurse / GP or Health Visitor for advice as there may be no need to delay the appointment.
- If you need to keep your child away from nursery or school while they are unwell and have a fever, please tell the school. Your Health Visitor, Community Nurse, GP / Practice Nurse will be able to advise you if you are unsure.

### What do I do if my child has a fever? (traffic light advice)

#### RED

If your child has any of these below:
- becomes unresponsive
- or becomes blue
- or is finding it hard to breathe
- or has a fit
- or develops a rash that does not disappear with pressure (see the 'glass test' overleaf)

**You need EMERGENCY help**

Call 999 - you need to be seen at the accident and emergency (A&E) department

Nearest Hospitals (open 24 hours 7 days a week):
- Frimley Park, Surrey
- Hillingdon Hospital
- John Radcliffe, Oxford
- Milton Keynes Hospital
- Royal Berkshire, Reading
- Stoke Mandeville Hospital, Aylesbury
- Wexham Park Hospital, Slough

Bring your child's Red Book with you.

#### AMBER

If your child's health gets worse or if you are worried:
- or if your child is not drinking
- or has signs of dehydration including dry mouth, no tears, sunken eyes, the soft spot at the top of the head is more depressed in than usual, more sleepy than usual, they look less and seem generally unwell
- or if your child's fever lasts longer than five days
- or if your baby is under six months, seek medical advice without delay (from your health visitor, GP / Practice nurse or A&E)

**You need to contact a nurse or doctor today**

Please ring your GP surgery during the day or when your GP surgery is closed, please call NHS 111

Bring your child's Red Book with you.

#### GREEN

If none of the features in the red or amber boxes above are present.

**Self care**

Using the advice on this leaflet you can care for your child at home.

If you feel you need advice please contact your Health Visitor or GP Surgery or your local pharmacy (follow the links at www.nhs.uk)

You can also call NHS 111
Further Advice / Follow-up

The Glass Test

Do the 'glass test' if your child has a rash. Press a glass tumbler firmly against the rash. If you can see the spots through the glass and they do not fade as you press the glass onto the skin then this is called a 'non-blanching rash'. If you see this type of rash, seek medical advice immediately. The rash is harder to see on dark skin so check paler areas, such as palms of the hands, soles of the feet and tummy.

If you need advice please try:

Your local pharmacy can be found at www.nhs.uk
