Free testing kits for 15 to 24 year olds

chlamydia

You don’t know if you have it!

That’s because there are no obvious signs or symptoms of chlamydia.
You can get chlamydia through unprotected sex and you can carry it with you for years.
Chlamydia can be easily treated with free antibiotics, but if you don’t get it sorted it can make you infertile.

So get yourself checked... Just to be sure.

You can now get a free confidential testing kit.
