The British Blind and Shutter Association

The BBSA is Britain’s only trade association representing companies that manufacture and supply interior and exterior blinds, awnings, security grills and shutters. The BBSA is leading the development of the child safety aspects of the only European Standard for internal blinds (EN 13120). All BBSA members have to comply with the child safety aspects of this standard and a number of non-members have committed to this requirement through the make it safe campaign.

You can see much more safety information, including a video at:

www.makeitsafe.org.uk

The CEN official standard EN 13120

“Complete elimination of the strangulation risk can only be achieved by keeping cords, chains, and tapes and similar out of the reach of children. Use of additional safety devices may reduce the risk of strangulation but cannot be considered foolproof. Motorisation eliminates the risk associated with looped and pull-cord operating mechanisms but the risk relating to inner tapes and cords (for relevant products) remains. Persons in charge of children are ultimately responsible for following the safety instructions provided by the manufacturer.”

Advice supported by RoSPA

RoSPA’s mission is to save lives and reduce injuries in all areas of life and has achieved significant changes through its campaigning work over the 90 years since its inception.

This leaflet is intended to provide information for educative and illustrative purposes only, and is not intended to be professional or technical advice. You should seek specific advice based on your situation from your installer, as the BBSA accepts no duty of care to you from any action you may take based on the information contained in this leaflet. 
You can take a number of practical, simple precautions to significantly reduce the risk.

Make looped cords and chains safe by using one of the available safety devices and by following the information below.

**Typical examples of safety devices are:**

- **Cleat**
  This should be securely fixed to an adjacent wall, out of the reach of children, and the cord/chain secured as shown, after each operation of the blind.

- **Cord/Chain Tidy**
  The following devices are secured to an adjacent wall and the cords/chains are held permanently taut by the device.

- **Chain-break connector**
  These will break apart when undue pressure is applied to the operating chain.

Motorised blinds have no operating cords or chains. External blinds typically have no operating cords or chains inside the property. Ask for expert advice.

They will give you the best possible advice on the most appropriate blinds, many of which do not contain operating cords or chains. They will also be pleased to give you further information on ways to make existing blinds safer.
